

MapInfo SQL

Duration : 1 Day

Overview

The one-day SQL course is designed for users with a good knowledge of MapInfo, but who have difficulty getting to grips with query building and the management and use of queries.

It's for those using any version of MapInfo Pro and is run as a hands-on session. Training notes are provided for back-up and revision purposes.

The course's aim is to give the user the ability to use SQL within MapInfo and allow them to textually and spatially analyse data.

Course Content

The SQL Select dialogue box

Overview, with explanations of drop-downs and boxes
What data goes in which box
Grouping data by column
Sorting data by column
Selecting columns and formatting an answer
Browser shortcuts for all the above

Operators

Mathematical
Logical
Spatial

Aggregates

What they do and how they work
Count(*), SIGMA and calculating statistics
SUM(), AVG(), MIN(), MAX() and weighting

Functions

What they do and how do they work
Maths functions
Date and time functions
String functions
Geographic functions

Joining Data

Why join data?
Spatial operators and geographic joins
Text based joins – inner or outer joins
Using data from joins

Saving queries: Pros and cons

Saving query templates
Saving via a workspace
Saving queries as tables
Working with queries
Explanation of error messages
